## Press release

# Siemens and SPIE cooperate on electric vehicle charging infrastructure

- Official partnership between Siemens and SPIE
- Comprehensive package for electric vehicle charging infrastructure
- First (DC) quick charger installed in Frankfurt

**Frankfurt, September 13<sup>th</sup>, 2017** – *Siemens has entered into a partnership with the multi-technical service provider SPIE to create an electric vehicle charging infrastructure. The aim is to provide comprehensive packages in line with customer requirements – from consulting and installing to the operation of electric vehicle charging stations, regardless of the back-end system used. With over 200 branches in Germany, SPIE is the ideal partner to install, commission, technically operate and integrate Siemens' portfolio of DC fast-charging systems into system solutions.*

The two companies have already initiated their partnership: Last week, Siemens launched a 50-kilowatt (kW) Compact Power Charger at the Frankfurt branch. As a result, employees, customers and visitors can now recharge their vehicles within a short space of time. Common charging standards, such as CCS, CHAdeMO and Type 2, are available here.

SPIE performed all of the construction work and commissioning for this project. In addition, SPIE is also in charge of technical operations and annual maintenance.

*“We are offering our customers a comprehensive package thanks to our dense network of locations and broad expertise in finding the right solutions as a multi-technical service provider. With us, this starts long before the actual construction begins, as we provide an extensive range of consulting services in the planning stages and perform service and maintenance work in addition to construction,”* explained Markus Holzke, Managing Director of SPIE Deutschland & Zentraleuropa. Siemens is providing charging systems with power outputs ranging from 50 kW to 350 kW: The Compact Power Charger’s power unit and operating unit are integrated into a housing, while the Multi-Charger’s power units and operating units are separate.

*“With our extensive portfolio, we can provide the right product in any power category and meet any requirements,”* explained Niels Geduldig, head of the business segment in charge at Siemens Large Drives. *“All of our DC charging systems can charge batteries with a power output of up to 920 volts. As a result, we are prepared for future generations of vehicles, giving our customers maximum investment security.”*

At New Mobility World in Frankfurt, the Solution Partner Emblem will be officially awarded to SPIE by management representatives on 13 September 2017. With this emblem, Siemens partners are certified for a specific product group in line with strict, uniform and global criteria and offered consistent training and support.

### **About Siemens AG**

Siemens AG (Berlin and Munich) is a global technology powerhouse that has stood for engineering excellence, innovation, quality, reliability and internationality for more than 165 years. The company is active in more than 200 countries, focusing on the areas of electrification, automation and digitalization. One of the world’s largest producers of energy-efficient, resource-saving technologies, Siemens is a leading supplier of efficient power generation and power transmission solutions and a pioneer in infrastructure solutions as well as automation, drive and software solutions for industry. The company is also a leading provider of medical imaging equipment – such as computed tomography and magnetic resonance imaging systems – and a leader in laboratory diagnostics as well as clinical IT. In fiscal 2016, which ended on September 30, 2016, Siemens generated revenue of €79.6 billion and net income of €5.6 billion. At the end of September 2016, the company had around 351,000 employees worldwide. Further information is available on the Internet at [www.siemens.com](http://www.siemens.com).
