SPIE presents expanded range of services at E-world energy and water in Essen

Essen, February 5th, 2018 – *SPIE Deutschland & Zentraleuropa is showcasing its expanded range of transmission and distribution services for the first time at E-world energy and water, one of the most important trade fairs for energy solutions of the future. SPIE's appearance at the trade fair is testament to its consistent development as a multi-technical services provider. Since 2014, SPIE has made ten acquisitions in Germany and Central Europe and has substantially expanded the scope of its expertise as a leading technical services provider for buildings, facilities and infrastructure, and significantly strengthened its local presence.*

By acquiring the SAG Group, SPIE has positioned itself as a leading system services provider for electricity, water, gas and telecommunications infrastructures and is significantly expanding its range of transmission and distribution services.

At the trade fair, the company will focus on electric mobility, lighting management, energy infrastructure system solutions for industrial companies, asset management solutions such as condition assessments of grids and facilities in addition to disposal management and smart grid solutions.

E-world energy and water provides an ideal dialogue platform for current and new customers, business partners, job applicants and press representatives to gain information on SPIE's expanded range of services, and to continue and intensify the level of contact with SPIE's transmission and distribution experts. *"Customers from the energy sector will benefit in the long term from the extensive technological expertise and the end-to-end range of services from a single source that we offer as a multi-technical services provider,"* said Markus Holzke, Managing Director of SPIE Deutschland & Zentraleuropa.
